

Quick Installation Guide

55" Standee (touch/non-touch)

Step 1: Install the wheels

Place the base on a flat surface, and lock 4 holes for the wheels.

During installation, please make sure with the brake plate facing outward before installing the screws.

Step 2: Install the signage to the base

Lock the base onto the signage. During installation, you can first place it on a desk or a flat surface, then turn the signage over with the front facing upward and align the three screw holes at the bottom as shown in the picture.

Once completed, the signage will be in the center of the base. You can then place the advertising machine with the front facing downward on the floor.

Step 3: Connect the cable(s) and power plug

Insert the key into the signage cover.

Install the antenna into the antenna port.

Install the power cord into the power port and switch on the power switch to the ON position as shown in the picture.

Install the USB receiver of the Nugens MK-N1 Air Mouse into the USB port.

Notes

1. The signage is set to power-on automatically when connected to a power socket.
2. The signage runs on Windows 10 Pro operating system. When shutting down, please shut it down normally as you would a computer. Do not cut off the power directly to avoid Windows system abnormalities or errors.
3. To power on signage, you can either turn on the black power switch or unplug and reconnect the power cord. Alternatively, you can simply press the red button to turn on the signage.
